DETAILED SPECIFICATIONS

1. **PROJECT MISSION.** The City of Clearwater is dedicated to providing superior services to its customers in order to improve the quality of life for Clearwater residents, businesses and visitors. The City is looking for vendors who share that dedication and will help the City meet that goal.
2. **INTRODUCTION.** The City of Clearwater (City) is seeking an Engineering firm for the design, procurement, and construction engineering inspection services (CEI) related to modifying the City's Water Treatment Plant Number 2 (WTP-2). This Request for Qualifications (RFQ) is a multiple phase project as outlined in the Reverse Osmosis WTP #2 System Evaluation Summary Report, a report prepared by McKim and Creed (Project 16-0029-UT).
3. **BACKGROUND.** The City operates WTP-2, which was designed to produce 6.25 million gallons per day (MGD). Due to issues with bromate formation, groundwater supply shortfalls, and increases in groundwater total dissolved solids (TDS) levels, the facility's production is currently limited to approximately 2.5 MGD. To compensate for the lost production, the City purchases potable water from Pinellas County Utilities. City staff has identified multiple operational challenges that have resulted in damaged equipment, increased maintenance requirements, and reduced water production.
4. **SCOPE OF WORK.** The City seeks an Engineering firm for the design, procurement, and construction engineering inspection services (CEI) of the city's WTP-2, including reviewing background information, the Reverse Osmosis WTP #2 System Evaluation Summary Report and its recommendations, and work with the City to implement some, or all the phases identified in the report. The following is a general overview of the WTP-2 System Evaluation recommended phasing:
 - Phase 1 – Reduce bromate levels while removing H₂S to allow for 2-skid operations.
 - Phase 2A – Increase wellfield supply to allow for 3-skid operation.
 - Phase 2B – Modify Reverse Osmosis (RO) system components for higher TDS levels
 - Phase 3 – Expand brackish wellfield to provide system rotational capacity and redundancy.

The City is also embarking on a separate Water Supply and Treatment Master Plan project that seeks to assess, evaluate, and provide recommended improvements to optimize City water supply facilities. A portion of that Master Plan will be to develop an estimate of the future TDS levels of the water being supplied to WTP-2.

The selected consultant for this RFQ will be required to review Water Supply and Treatment Master Plan deliverables that relate to future WTP-2 TDS levels and perform supplemental work as required to accept responsible charge and incorporate the future WTP-2 TDS levels into the Consultant's WTP-2 design(s).
