Re: Short Term Recycling Processing

Dear Mr. St. Aimee:

Per our recent discussion regarding recycling processing, WM-Waste Management will offer the City of Clearwater a "spot" rate for recycling materials processing. As we discussed this will be a short-term arrangement until the city determines their long-term plan.

WM would be able to accept material under the following conditions:

- The material is of sufficient quality such that most of the load could be marketed as a commodity. This would be determined through visual inspections of the loads.
- The total monthly capacity available to the city for single stream processing is up to 850 tons per month delivered to the WM-Tampa Material Recycling Facility. If sending more than four (4) trailer loads on a given weekday (Monday – Friday), communication with site management must take place prior to the additional shipments.
- Total processing rate per ton will be \$150.00/ton with no revenue sharing.
- In order to assist the city, WM can commit to this arrangement on a month-to-month basis until a new agreement can be reached.

WM-Waste Management would welcome further discussion around a future longer-term contract with volume commitment. We look forward to continuing to service the City of Clearwater. Please reach out to me with any inquiries you may have.

Sincerely,

Tim Bowers
